

BG Equity Infrastructure Fund – Compartment 1

Sustainability-related disclosures required for Article 8 financial products under the Regulation (EU) 2019/2088 on sustainability-related disclosures in the financial services sector (“SFDR”)

Preamble

BG Equity Infrastructure Fund – Compartment 1 (the “Compartment”) promotes contribution to climate change mitigation through the investments in target investment vehicles (the “Target Investments”). The Target Investments build a diversified portfolio that invests in (i) infrastructure projects in the renewable energy sector, (ii) energy transition related infrastructure projects and (iii) infrastructure projects that are ancillary to, or supportive of, energy transition.

The Compartment does not invest in issuers that qualify as sustainable investment in accordance with Article 2 (17) of Regulation (EU) 2019/2088 (“SFDR”).

The Compartment is not considering the EU criteria for environmentally sustainable economic activities as defined under the EU Taxonomy Regulation to determine the attainment of the sustainable environmental or social characteristics that it promotes.

The Compartment invests a minimum of 75% of its net assets to investments that are aligned to the promoted environmental and social characteristics.

No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Compartment.

Summary

The Compartment promotes contribution to climate change mitigation through the investments in target investment vehicles (the “Target Investments”). The Target Investments build a diversified portfolio that invests in (i) infrastructure projects in the renewable energy sector, (ii) energy transition related infrastructure projects and (iii) infrastructure projects that are ancillary to, or supportive of, energy transition.

In order to achieve the promotion of this environmental characteristics, the Investment Manager of the Target Investments ensures that the contribution to this environmental characteristic is taken into account at each stage of its investment process as well as infrastructure companies in which Investments are made follow good governance practices, as further described in the investment strategy section.

The investment strategy of the Target Investments is to make investments in infrastructure companies focused on renewable energy and support technologies, in particular construction-ready or late-stage development projects relating to greenfield solar, wind, battery storage and network assets across OECD countries in Asia Pacific and Europe.

The Investment Manager of the Target Investments ensures that environmental, social and governance aspects are considered and maximized not only in the selection of Investments, but at every stage of an Investment – from the outset of origination, through to the due diligence and acquisition phase, and into the post-acquisition phase with ongoing monitoring, management, and stakeholder engagement, in particular:

- Pre-acquisition. Prior to making any investment decision, the Investment Manager performs a Sustainable Due Diligence on the proposed infrastructure company, evaluating a variety of factors including:
 - an assessment of the company against the principle adverse impact (PAI) indicators
 - an agreement in the form of contractual clauses in shareholder’s agreement or in the transaction documents with the relevant counterparties of the target infrastructure company to facilitate effective measurement and reporting on the suitable indicators, namely sustainability indicators, as further described below and adverse impact indicators for the Investment’s contribution to the environmental and social characteristics promoted.
- Post-acquisition. The Investment Manager will collect and analyze data from the investee infrastructure companies on the suitable indicators to establish the attainment of promotion of chosen characteristic and impact. The Investment Manager will engage with the investee infrastructure companies as appropriate to discuss deviations from the promoted characteristic and suitable indicators. The Investment Manager will also produce on a periodic basis a report that evaluates the attainment of promoted characteristic and the impact performance of the financial product’s Investments in infrastructure companies.

The binding elements of the investment strategy are the following:

- All infrastructure investments qualify as promoting climate change mitigation at acquisition.
- All infrastructure investments are subject to the Sustainable Due Diligence prior-acquisition.
- No infrastructure investment is involved in violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises or exposed to companies active in the fossil fuel sector or controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons). Such screening is performed both pre-acquisition and at least on an annual basis during post-acquisition stage. In order to determine whether the Compartment and its Investments are attaining the promotion of climate change mitigation, the Investment Manager will track the following sustainability indicators at portfolio and/or asset level:

| Sustainability indicator | Metric |
|--|----------------------|
| Capital invested into i) renewable energy, ii) energy transition related, iii) ancillary to energy transition assets | EUR/Total Commitment |
| GHG emissions saved or avoided | kt CO2e/a |
| Electricity generation capacity from renewable energy sources | MW |
| Electricity produced from renewable energy sources | GWh/yr |
| Tonnes of Oil Equivalent (TOE) / Tonnes of Coal Equivalent (TCE) avoided | TOE / TCE |

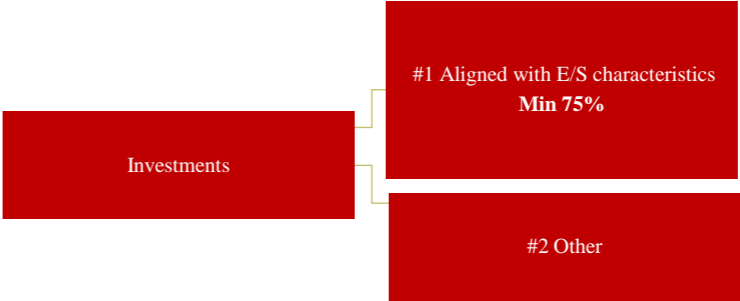

Sustainable Finance Disclosure Regulation Level 2 – Website Disclosure

| Section | Regulatory Requirements | Disclosure |
|---|---|--|
| Summary Article 25 – SFDR II | In the website section ‘Summary’ referred to in Article 24, point (a), financial market participants shall summarise all the information contained in the different sections referred to in that Article about the financial products that promote environmental or social characteristics. The summary section shall have a maximum length of two sides of A4-sized paper when printed. | The Compartment promotes contribution to climate change mitigation through the investments in target investment vehicles (the “Target Investments”). The Target Investments build a diversified portfolio that invests in (i) infrastructure projects in the renewable energy sector, (ii) energy transition related infrastructure projects and (iii) infrastructure projects that are ancillary to, or supportive of, energy transition. In order to achieve the promotion of this environmental characteristics, the Investment Manager of the Target Investments ensures that the contribution to this environmental characteristic is taken into account at each stage of its investment process as well as infrastructure companies in which Investments are made follow good governance practices, as further described in the investment strategy section. |
| | <p>The website section ‘Summary’ referred to in Article 24, point (a), shall be provided in at least the following languages:</p> <p>(a) one of the official languages of the home Member State and, where different and where the financial product is made available in more than one Member State, in an additional language customary in the sphere of international finance;</p> <p>(b) where the financial product is made available in a host Member State, one of the official languages of that host Member State.</p> | |
| No sustainable investment objective Article 26 – SFDR L2 | In the website section ‘No sustainable investment objective’ referred to in Article 24, point (b), financial market participants shall insert the following statement: “This financial product promotes environmental or social characteristics but does not have as its objective sustainable investment.” | This financial product promotes environmental or social characteristics but does not have as its objective sustainable investment. |
| | Where the financial product commits to making one or more sustainable investments, financial market participants shall in the website section ‘No sustainable investment objective’ referred to in Article 24, point (b), explain how the sustainable investment does not significantly harm any of the sustainable investment objectives, including all of the following: | |
| | <ul style="list-style-type: none"> how the indicators for adverse impacts in Table 1 of Annex I, and any relevant indicators in Tables 2 and 3 of that Annex I, are taken into account; | |
| | <ul style="list-style-type: none"> whether the sustainable investment is aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, including the principles and rights set out in the eight fundamental conventions identified in the Declaration of the International Labour Organisation on Fundamental Principles and Rights at Work and the International Bill of Human Rights. | |
| Environmental or social | In the website section ‘Environmental or social characteristics of the financial product’ referred to in Article 24, point (c), financial market | The Compartment promotes contribution to climate change mitigation through the investments in target investment vehicles (the “Target Investments”). The Target Investments build a diversified portfolio that |

| Sustainability indicator | Calculation methodology | | | | | | | | | | | | | |
| Capital invested into i) renewable energy, ii) energy transition-related, iii) ancillary to energy transition assets | Calculation is conducted by allocating each investment into the relevant category, e.g., an investment in a company that owns a solar farm would be in category 1 and an investment in a company that owns a large-scale battery would be category 2. After allocating the investments made, these are then divided by the total commitments drawn from the investors. | | | | | | | | | | | | | |
| GHG emissions saved or avoided | Depending on the type of investment, underlying assets and jurisdiction the investment and/or asset is operating, the calculation of the GHG emissions avoided will vary. The calculation will follow the generally accepted process of calculating the amount of GHG avoided such as for an investment in a solar asset, the GHG avoided is usually calculated by measuring the GHG intensity of the electricity market the asset is operating in on a CO2et/MWh and multiplying by the amount of net energy produced in the given period. | | | | | | | | | | | | | |
| Electricity generation capacity from renewable energy sources | The calculation is undertaken by calculating the amount of electricity capacity authorized to be connected by a particular asset/investment in its jurisdiction provided the asset is classified as a renewable energy asset as per sustainability indicator 1. | | | | | | | | | | | | | |
| Electricity produced from renewable energy sources | This is calculated by adding the total amount of energy produced from assets that are classified as renewable energy assets in 1 above as measured on a net basis each year. For example, if a wind asset produced 100,000MWh and uses 5,000MWh in a year, the total renewable energy produced for this asset would be 95,000MWh. | | | | | | | | | | | | | |
| Tonnes of Oil Equivalent (TOE) / Tonnes of Coal Equivalent (TCE) avoided | Each asset and investment tracks the amount of oil or oil equivalent used each year and this is divided by the amount of coal equivalent avoided based on accepted methodology for calculating the equivalent amount. Each jurisdiction will have differing TCE based on the particular aspects of the operational jurisdiction. | | | | | | | | | | | | | |
| Data sources and processing | In the website section ‘Data sources and processing’ referred to in Article 24, point (h), financial market participants shall describe all of the following: | | | | | | | | | | | | | |
| Article 32 – SFDR L2 | <ul style="list-style-type: none">the data sources used to attain each of the environmental or social characteristics promoted by the financial product; | To capture data and report on environmental and social characteristics, the Investment Manager of the Target Investments ensures to include contractual clauses in shareholder’s agreement or in the transaction documents with the relevant counterparties. As a consequence, information is gathered, for infrastructure companies, at every stage of the investment process; in particular, dedicated tools are in place, such as, but not limited to, due diligence questionnaire which is given to key project counterparties | | | | | | | | | | | | |
| | <ul style="list-style-type: none">the measures taken to ensure data quality; | | | | | | | | | | | | | |
| | <ul style="list-style-type: none">how data are processed; | | | | | | | | | | | | | |

| Section | Regulatory Requirements | Disclosure |
|--|--|---|
| | <ul style="list-style-type: none"> the proportion of data that are estimated. | to complete and gather critical information (e.g., their approach to governance and their positioning with respect to principal adverse impacts). If data cannot be directly accessed the Investment Manager will use “Best Efforts”, meaning that the Investment Manager is committed to obtaining data from each counterparty, to the extent relevant, that is involved in the investee company and its underlying assets, or by carrying out additional research, cooperating with third party data providers or external experts or making reasonable assumptions |
| Limitations to methodologies and data | In the website section ‘Limitations to methodologies and data’ referred to in Article 24, point (i), financial market participants shall describe all of the following: | |
| Article 33 – SFDR L2 | <ul style="list-style-type: none"> any limitations to the methodologies referred to in Article 24, point (g), and to the data sources referred to in Article 24, point (h); | As described above, some of the data will be based on estimates. Additionally, even if dedicated contractual clauses will be included in relevant documents of the target projects, data quality of data provided by the target infrastructure companies may differ and be based on different methodologies; this is mainly due to the fact that the target companies the Compartment invests in are not subject to mandatory non-financial reporting standards and which, due to their small size, may have less sophisticated internal governance and reporting arrangements than larger corporates. While some limitations do exist, the use of more than one indicator allows the Investment Manager to determine with strong confidence that the investments will continue to deliver on the E/S characteristics described. By focusing on more than one indicator, the Investment Manager is not relying on any one particular source or limitation for the calculation and therefore determining the attainment of the specific underlying promotional characteristics. |
| | <ul style="list-style-type: none"> how such limitations do not affect how the environmental or social characteristics promoted by the financial product are met. | |
| Due Diligence | In the website section ‘Due diligence’ referred to in Article 24, point (j), financial market participants shall describe the due diligence carried out on the underlying assets of the financial product, including the internal and external controls on that due diligence. | The Sustainable Due Diligence performed along pre-acquisition stage aims at ensuring that all target infrastructure companies of the Target Investments promote climate change mitigation, as well as are compliant with the others binding elements. To do so, the Compartment leverages the Investment Manager expertise in the energy transition-related infrastructure asset class to identify attractive investment opportunities. This includes a depth of experience in analysing a broad range of issues such as geotechnical risks, other site-specific risks and opportunities, community risks, weather risk, construction risk, revenue risks and opportunities, marginal loss factors, distribution loss factors, potential curtailment, connection risk, regulatory and political risks and others. The Investment Manager uses both internal and external resources for this due diligence that are reviewed and checked at varying stages of the investment process. This may include the use of an external consultant on environmental risks in the due diligence phase or supply chain assessments during the negotiation phase. As part of its risk assessment to the benefit of the Investment Committee, the risk function of the Manager performs a review of the sustainability due diligence conducted by the Investment Manager, in order to ensure that the E/S characteristics of the target investments have been assessed and they are in line with the fund investment policy and risk profile |
| Engagement policies | In the website section ‘Engagement policies’ referred to in Article 24, point (k), financial market participants shall describe the engagement policies implemented where engagement is part of the environmental or social investment strategy, including any management procedures applicable to sustainability-related controversies in investee companies. | In line with the private assets’ nature of the target investments, engagement in the sense of exercising voting rights is not relevant to the Target Investments’ strategy. However, the Target Investments will engage with project counterparties and other shareholders in project companies through entering into share purchase agreements and shareholder agreements to support the environmental characteristic of the Compartment and to ensure good governance practices. Following the acquisition of an infrastructure company, the Investment Manager adopts an active and hands-on approach to the asset management of all projects in order to maximise long-term value creation. This includes oversight of construction progress; detailed portfolio monitoring to ensure any operational issues are highlighted and |

| | | addressed expediently; oversight of continual preventative maintenance; and identification of opportunities to enhance performance or upgrade assets from a financial and sustainability point of view. |
| Designated reference benchmark – Optional Article 36 – SFDR L2 | In the website section ‘Designated reference benchmark’ referred to in Article 24, point (l), financial market participants shall describe whether an index has been designated as a reference benchmark to meet the environmental or social characteristics promoted by the financial product, and how that index is aligned with the environmental or social characteristics promoted by the financial product, including the input data, the methodologies used to select those data, the rebalancing methodologies and how the index is calculated. | No reference benchmark has been designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund. |
